

Installing Brushes in Photoshop

Once you have found the brush file, you need to put a copy of it into your **Avatar folder** so that you may use it in Photoshop®. Open up Photoshop® and click on the brush icon. After that you must click on the box that allows you to change the brush size and shape.

Once the dropdown has come up you need to click this arrow and then click on Load Brush

The files should have an icon like these. After selecting the one you need you click load. Then you should have the brushes in your brush dropdown area.

REMEMBER TO SAVE YOUR WORK OFTEN!!!
